

Web 3.0 and Metaverse Presentation

The future of internet

Abu Hurairah

Certified Web and Mobile Application Developer

AbuHurairah127

Overview

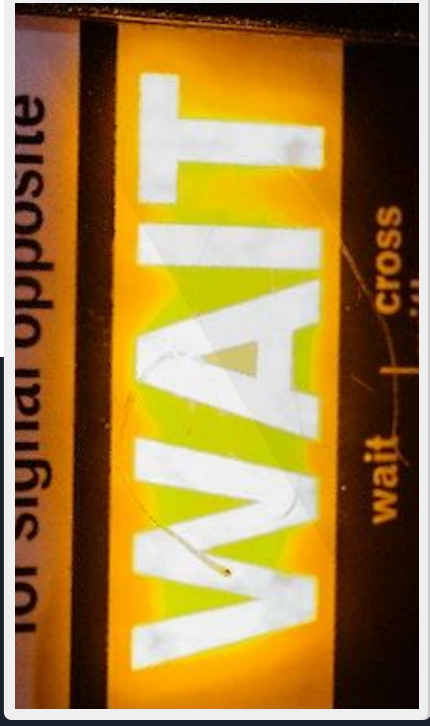

Today I am here to discuss Web 3.0 and Metaverse:

- The insane future of Web 3.0 and Metaverse
- In this session we will cover the basic introduction to :
 - Blockchain and decentralized databases
 - Cryptocurrency, bitcoin and stable coins
 - VR (Virtual Reality) headsets
 - AR (Augmented Reality)
 - Web 3.0 and DAO (decentralized autonomous organization)
 - And finally **Metaverse**

Metaverse

Before Deep
diving in
Metaverse

We have to cover some
basic topics on which
Metaverse will lay

Understanding Blockchain

01

As the internet is revolutionizing very fast. And almost all the systems have shifted from manual to computerized systems.

02

All the data is being stored in centralized Database which is easy to modify.

03

Blockchain is decentralized database almost impossible to modify

Separate video for blockchain is available on the channel

Cryptocurrency

01 Examples: Bitcoin, Ethereum, Polygon etc

02 A virtual or digital currency that is secured by Cryptography and based on network that is distributed across a large number of computers.

VR (Virtual Reality)

01 Special glasses will be used known as VR (Virtual Reality) Headset

02 Available of different companies \$300, also use different sensors for the motion and to touch something.

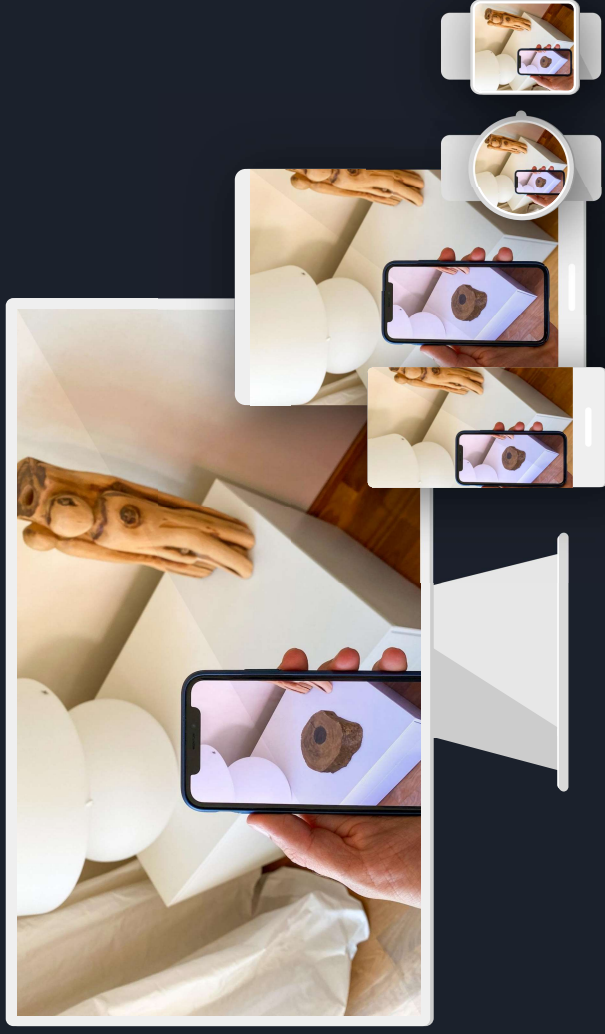

Augmented Reality

Ar is the integration of digital information with user's environment in real time.

A real time
environment With
generated
perceptual
information overlaid
on it.

Understanding Web 3.0

01

Based on ownership and decentralization and facilitated via blockchain, Web3 refers to the conceptual third iteration of the internet.

02

Many Web2 centralized platforms will play an important role in the Metaverse, and even Web3 today relies on elements of centralization.

Metaverse

The Future of Internet

A massively-scaled, persistent, interactive, and interoperable real-time platform comprised of interconnected virtual worlds where people can socialize, work, transact, play, and create.

Metaverse

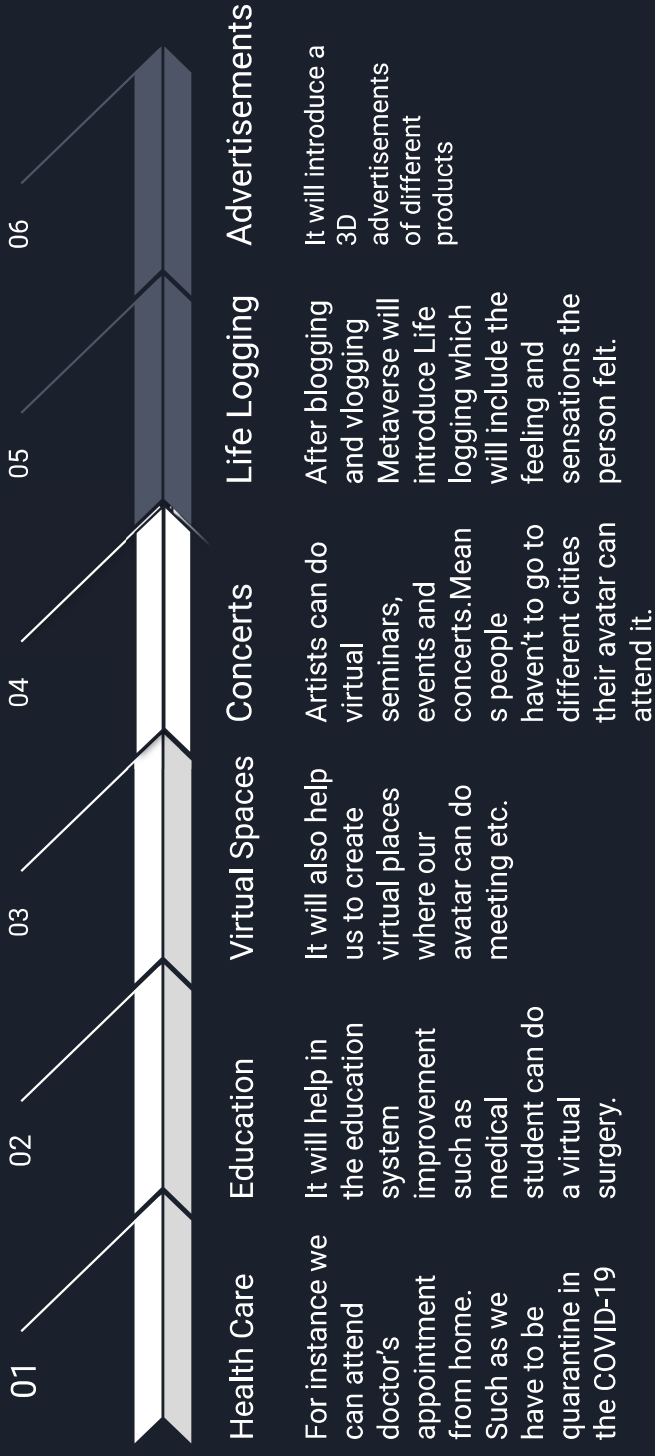

Metaverse is 3D version of internet and computing at large scale.

This includes the ownership as well as the hardware from user.

Metaverse Applications

Thank you!

For listening me

Any Question?
